Where:

Normative Energy Requirement (in kcal) for an Auction Window = [100% x {energy requirement (calculated in kcal on the basis of the consumption norms set out in **Annexure VI**) of the Specified End Use Plant for the Auction Window of applicable period(3/6/12 months) and for the capacity[#] for which the Bidder has participated in the Auction Window and against which the Bidder does not have a PPA less the energy requirement for the Auction Window of applicable period(3/6/12 months) for sale of power on merchant basis met through the captive coal mine/coal block }]

[#]For the purpose of computation of Normative Coal Requirement, capacity shall be gross capacity at generation end.

All the calculations shall be done on the basis of the lower limits of that particular grade’s GCV range.

It is further clarified that, for the purposes of computation of the Normative Energy Requirement basis the abovementioned formula, at any stage of the Auction Process, if the energy requirement of the Specified End Use Plant for the Auction Window of applicable period(3/6/12 months) met through any allocation of coal linkage(s) pursuant to the Auction of any Lot conducted by CIL and/or by SCCL under Paragraph B(viii)(a) of the Policy covering Paragraph B(iii) of the Policy shall be deducted, irrespective of the status of issuance of the Intimation Letter or Commencement of Coal Supply.

8.1.1 The CQ may be supplied (a) in 3/6/12 (three/six/twelve) equal monthly instalments, where each instalment shall be one third/one sixth/one twelfth (1/3rd)/(1/6th)/(1/12th) respectively of the CQ as provided in the Intimation Letter; or (b) entirely in a single instalment in the first month of the Supply Period and each such instalment may hereinafter be referred to as the **“Scheduled Quantity”** or **“SQ”**).

8.1.2 In the event the SQ is not sufficient for formation of a rake in a month, such SQ or part thereof shall be permitted to be carried forward and clubbed with the SQ of the next month or of the subsequent month, if required, until such cumulative quantity is sufficient to form a rake of Coal. However, no carry forward of any SQ or part thereof will be permitted beyond the Supply Period and the same shall lapse upon expiry of Supply Period. No Intimation Letter shall be issued to those bidders whose Allocated Quantity under an Auction Window for a particular Supply Period from a particular source (Rail source) is less than 4000

tonnes. No penalty shall be levied on the quantity which could not be lifted due to such quantity being insufficient for formation of rake.

8.2.1 Variation of less than 10% (ten percent) in a SQ, may be made if the same is notified to other Party prior to commencement of that Month. Variation of 10% (ten percent) or more, in SQ whether due to insufficient quantity for formation of a rake or otherwise, may be made only with the written mutual consent of the other Party, expressed prior to commencement of that Month. The total quantity of coal supplied in the Supply Period, shall not exceed the CQ.

Level of Delivery / Lifting of Coal in the Supply Period	Percentage of Penalty for the failed quantity (at the rate of weighted average of Notified Prices of Grades of Coal supplied)
Below 75% but up to 65% of CQ	0 – 10
Below 65% but up to 50% of CQ	10 – 40
Below 50% of CQ	40

Such compensation for short delivery/lifting, shall, however, not be applicable for both Purchaser/Seller in the following case:

- Portion of bid quantity not sufficient to form a rake and not deliverable by Rail mode

The penalty payable shall be computed in the same manner as done slab-wise for computation of income-tax. However, unlike income tax, the percentage of compensation shall grow on linear basis within each slab

8.3.2 The Seller shall be entitled to modify/amend the penalty levels pursuant to review undertaken by the MOC.

8.3.3 Compensation for the Failed Quantity shall be payable by the defaulting Party to the other Party within a period of 15 (fifteen) days from the date of receipt of a claim in this regard from the non-defaulting Party. In the event of non-payment within the due date, the defaulting Party shall be liable to pay interest as per the terms and conditions of the Scheme Document. In the event that the compensation along with interest payable thereon is not paid within a period of 30 (thirty) days of receipt of the claim as aforesaid, the Seller shall have the right to invoke the Performance Security. No penalty shall be levied in case of short delivery/lifting due to non-formation of rake.

8.4 Level of Delivery

Level of Delivery shall be calculated in the form of percentage as per the following formula:

$$\text{Level of Delivery (LD)} = \frac{(\text{DQ} + \text{DDQ} + \text{FM} + \text{RF}) \times 100}{\text{CQ}}$$

Where:

LD = Level of Delivery of Coal by the Seller for the Supply Period.

DQ = Delivered Quantity, namely, aggregate actual quantities of Coal delivered by the Seller.

DDQ = Deemed Delivered Quantity, reckoned as per Scheme Document

FM = Proportionate quantity of Coal which could not be delivered by the Seller during the Supply Period due to occurrence of a Force Majeure Act(s) affecting the Seller and/or the Purchaser, calculated as under:

$$FM = \frac{CQ \times \text{Number of days lost under applicable Force Majeure Act(s)}}{90}$$

Note: For the purpose of calculation of 'Number of days lost under applicable Force Majeure Act(s)', affecting both the Parties shall be counted only once.

RF = Quantity of Coal that could not be supplied by the Seller owing to the railways not allotting wagons or not placing wagons for loading, in spite of valid indent/offer submitted by the Seller to the railways against valid program(s) submitted by the Purchaser for the purpose.

8.5 Level of Lifting

Level of Lifting shall be calculated in the form of percentage as per the following formula:

$$\text{Level of Lifting (LL)} = \frac{(CQ - DDQ) \times 100}{CQ}$$

Where:

LL = Level of Lifting of Coal by the Purchaser.

DDQ shall have the same meaning as given in point 8.6.

For the purpose of computing DDQ and RF, the weight per rake will be as specified by the Seller in the Intimation Letter or any other relevant document/notification, which shall be used for calculation of compensation from either the Purchaser or the Seller..

8.6 Deemed Delivered Quantity

The aggregate of the following items shall constitute the Deemed Delivered Quantity ("**Deemed Delivered Quantity**").

Note(s):

CERC had notified the Central Electricity Regulatory Commission (Terms and Conditions of Tariff) Regulations, 2019 on 7th March, 2019 which would be applicable for the period 2019-24. Proviso 43(2) of the regulations provides for calculation of Energy charge rate (ECR) in Rupees per kWh on ex-power plant basis. In determination of ECR, Weighted Average Gross calorific value of coal as received, in kCal per kg for coal based stations less 85 kCal/kg on account of variation during storage at generating station is being considered by the Commission. Accordingly, less 85kCal/kg has been considered GCV while arriving at the annual coal consumption.

* In case of main stem pressure is 150 ata or above the Unit Heat Rate shall be reduced by 100 kcal/kWh

\$ In case of units of 500 MW and above size including Supercritical units having Motor Driven Boiler Feed Pump (MDBFP), the unit heat rate shall be reduced by 50 kcal/kwh.

- Following formula may be used for conversion of coal consumption to MTPA per 1000 MW:
MTPA per 1000 MW = Tonnes per MW per Annum / 1000
- The transit and handling losses shall be as per norms prescribed in Central Electricity Regulatory Commission (Terms and Conditions of Tariff) Regulations, 2019 which is 0.2% for pithead and 0.8% for non-pithead stations.
- These norms will be applicable for Captive Power Plants also.

- (a) Quality Council of India (“QCI”)
- (b) Indian Institute of Technology (“Indian School of Mines”); or
- (c) Such other agencies as may be empaneled by CIL from time to time

The cost of sampling and analysis by TPA shall be shared on 50:50 basis by the Seller and the Purchaser.

All tools and tackles, plastic bags, sealing compounds and other items required for collection, preparation, storage and analysis of the sample shall be arranged by the TPA.

2. DETAILED MODALITIES FOR THIRD PARTY SAMPLING

Modalities for collection, handling, storage, preparation and analysis of TPA samples:

2.1 GENERAL

- a) In order to commence third party sampling, a tripartite agreement will be signed between the Seller, the Purchaser and the TPA. The format of tripartite agreement will be provided by the Seller.
- b) Samples shall be collected by TPA lot-wise.
- c) Samples shall be collected, packed and transported by the TPA in such a manner so as to make these tamper proof to the satisfaction of Seller and Purchaser for which detailed procedure may be worked out at Delivery Point jointly by representatives of the Seller, the Purchaser and the TPA.
- d) Name of the colliery/Siding/Purchaser, date of collection and other identification details (eg. Rake no. in case of rail supply etc.) shall be properly recorded and a code number shall be assigned for each sample for identification and reconciliation of results.
- e) Collection and preparation of samples will be witnessed by the representative of Seller and Purchaser. In case the representative of either party is not present or do not participate, the work will be done by TPA and absence or failure of participation shall not be considered as a ground for disputing the result.
- f) Proper analysis records like print out of the results from automatic Bomb Calorimeter etc. shall be maintained at the Laboratories where the samples are analyzed by the TPA. TPA shall ensure that samples are analysed in NABL accredited labs.
- g) Laboratory samples prepared shall be in the size of 12.5 mm for the Total Moisture and for ash, Equilibrated Moisture and GCV analysis, 212 μ (micron) IS sieve. Due care shall be taken to ensure that before analysis, in test laboratory, further sieving or pulverizing is not required.
- h) Samples collected at the loading end shall be analyzed as per latest BIS Standards (IS:1350 Part I – 1984 for determination of ash and moisture content and IS:1350 Part-II-1970 for determination of GCV).

- i) The TPA shall communicate the analysis result of the sample to the Seller and Purchaser within fifteen (15) days of sample collection. The Seller/the Purchaser may raise a dispute, if any, regarding the findings of the TPA within seven (7) days of the submission of the analysis result by the TPA.
- j) Monthly statements containing the details of each and every analysis result finalized during a month based on TPA/referee analysis, as the case may be, shall be prepared indicating *inter alia* the quantity of Coal covered by the respective analysis results. The finalized results shall be applied for billing/commercial purpose. Copy of the monthly statement/report shall be submitted to Seller and Purchaser by the TPA.
- k) The final pulverized sample will be divided into four parts viz. Set – I, Set – II, Set –III and Set – IV as follows:
 - (i) Set – I shall be taken by the TPA to its NABL Accredited Laboratory for analysis of ash, moisture and GCV as per latest BIS Standards (IS: 1350 Part 1-1984) or BIS Standards (IS: 1350 Part-II-1970), as applicable;
 - (ii) Set – II and Set – III of the sample shall be handed over by the TPA to the Seller and the Purchaser respectively for their own analysis; and
 - (iii) Set – IV of the sample called Referee Sample shall be sealed jointly by the TPA and representatives of Seller and Purchaser and shall be kept in the custody of TPA at the Delivery Point under lock and key arrangements. The referee sample shall be retained in sealed condition (duly signed by the representatives of Seller and Purchaser and the TPA) for minimum of thirty (30) days from the date of sample collection, after which it may be destroyed with proper records by TPA. The sample shall be packed and transported by the TPA to referee lab, in tamper proof manner to the satisfaction of Seller and Purchaser.
- l) Total Moisture determination will be done at nearest laboratory of the Seller and remaining tests/analysis (moisture, ash, GCV on Equilibrated Basis) will be done by the TPA as per BIS Standards (IS: 1350 Part 1-1984) or BIS Standards (IS: 1350 Part-II-1970), as applicable.
- m) In the event of any dispute (which shall be raised not later than seven (7) days from the date of receipt of result from the TPA), Set – IV shall be sent for referee analysis by the TPA within seventy two (72) hours of the dispute. Referee sample results shall be declared within 15 days from the date on which sample is disputed by Seller or Purchaser. For this purpose, TPA shall ensure that referee samples are transported to the mutually agreed (Seller and Purchaser) designated laboratories of the government agencies/institutions. TPA shall follow a foolproof coding and decoding system for referee analysis and also ensure distribution of referee samples amongst designated referee labs in a judicious manner considering the workload, equitable distribution, infrastructure etc. at various labs. The cost incurred for analysis of referee sample including the cost of transportation to the referee laboratory, shall be borne totally by the Party raising the dispute. The findings of such designated laboratory(ies) shall be binding on the Purchaser and the Seller for commercial purposes.
- n) If the timelines specified herein for declaration of TPA result or raising dispute are not adhered to, then, such result or dispute, as the case may be, will not be applicable for any purpose, unless the delay is jointly waived in writing by both the Seller and the Purchaser
- o) Third Party Sampling is mandatory for supplies from Cost Plus Sources. In case third party sampling could not be carried out for any reason, carrying out joint sampling shall be mandatory

2.2 COLLECTION OF SAMPLES FROM WAGONS (Rail and MGR)

- a) For the purpose of sampling each lot of Coal supplied from one Delivery Point shall be considered as a lot.
- b) Each day's supply shall be considered as one lot for the purpose of sampling in case of coal supplies by MGR.
- c) Each lot shall be divided into sub-lots in a manner that the quantity of Coal/number of wagons in such sub-lots is more or less equal. The number of sub-lots shall be determined as under:

No. of wagons in the rake	Number of sub lots
Up to 30 wagons	4
>30 wagons up to 50 wagons	5
>50 wagons and above	6

- d) From each of the sub-lots, one (1) wagon each shall be selected as per random table of IS: 436 (Part I/Section I) 1964 for collection of increments.
- e) In each wagon selected for sampling, the sample will be drawn from the spot in a manner so that if in one (1) wagon the sample is collected at one end, in the next wagon the spot will be in the middle of the wagon and in the third wagon at the other end and this sampling procedure will be repeated for subsequent wagons.
- f) Before collecting the samples, the spot will be leveled and at least 25 cm of Coal surface shall be removed/scrapped from the top and the place will be leveled for an area of 50 cm by 50 cm.
- g) About 50 kg of sample shall be collected from each selected wagon in the lot by drawing 10 increments of approx. 5 kg each with the help of shovel/ scoop.
- h) Any stone/shale of size more than that indicated in Schedule 1 to Intimation Letter shall be removed/discarded, however all stones/shale of size in terms of Schedule 1 to Intimation Letter shall form part of the sample collected.
- i) Samples collected from all the selected wagons in a lot shall be mixed separately to form gross sample accordingly.
- j) Item (d) to (g) above shall be applicable for Coal supplied in box wagons as well as BOBR wagons where there is no live overhead traction line.
- k) In case of having live overhead traction line, TPA shall ensure that the power supply in the overhead traction is switched off to facilitate collection of joint samples from BOX/BOBR wagons pursuant to point 2.2d) to point 2.2g) above.

2.3 COLLECTION OF SAMPLES OF COAL DESPATCHES BY ROAD

- a) Sample shall be collected lot-wise on daily basis round the clock, depending upon the timings of trucks/vehicles allowed for exist by the Seller at respective dispatch point(s).
- b) The first truck for TPA sampling on a day shall be selected randomly from the first eight trucks placed for loading by the Purchaser. Every eighth (8th) truck there after shall be subjected to TPA sampling.
- c) The spot at the top of the truck, will be leveled and at least 25 cm of Coal surface shall be removed/scrapped from the top and the place will be leveled for an area of 50 cm by 50 cm for collection of sample.

- d) About 30 kg of sample shall be collected from each truck by drawing 6 increments of approx. 5 kg each with the help of shovel/scoop.
- e) All the samples collected from every eighth truck shall be mixed together to form a gross sample.
- f) Any stone/shale of size more than that indicated in Schedule 1 to Intimation Letter shall be removed/discarded, however all stone/shale of size as mentioned in Schedule 1 to Intimation Letter shall form the part of the sample collected.

2.4 COLLECTION OF SAMPLES FROM CONVEYOR BELT/ROPEWAYS/ PIPELINES

- a) Samples will be taken lot-wise.
- b) The sample shall be collected in increments of full cross section and thickness of the stream in one operation in a regular interval of time as mutually decided by both Seller and Purchaser and lot shall consist of samples so collected during a day i.e. 0.00 Hr to 0.00 Hr. of the following day.
- c) Before collecting the increments, the speed of the conveyer belt/ropeways/pipelines and quantum of material passing a certain point in a given time shall be ascertained so that an appropriate spacing of time between increments may be arranged over the whole of the lot.
- d) In case of supply through conveyor belt, if it is practicable to stop the belt periodically, increment may be collected from the whole cross section of the stream by sweeping the whole of the Coal lying between the sides of a suitable frame placed across the belt.
